

A+ Fire Safety Certification

A certification mark for active and passive fire protection products

The A+ Fire Safety* brand is a product certification scheme, accredited by ENAC (signatory to the Multilateral Recognition Agreement, MLA) with accreditation No.12/C-PR054, which aims to certify technical performance related to active and passive fire protection, through quality assessment, traceability, reliability and technical characteristics products.

The A+ Fire Safety brand stands out from other certifications in the market for the fact that it is endorsed by Applus+, a brand with prestige and experience accumulated for more 30 years in the firefighting sector. This Positioning of Applus+ allows manufacturers to bring their products to market by differentiating themselves from the competition.

The A+ Fire Safety brand is recognized by different governments in the Middle East, in the respective Civil Defense schemes, which means the passport for the free marketing of products certified by Applus+ in those markets.

* The A+ Fire Safety brand is the property Of LGAI Technological Center S. A. (Applus+ Laboratories)

How does it work?

When initiating a certification project, our experts conduct an initial study to characterize the fire protection system, applicable regulations and the scope of certification.

This initial study will optimize the initial trials and evaluations required, as well as the estimated schedule of the project. During the process, designated Applus+ personnel perform samples of the product at the production factory for further Laboratory testing and inspection initial production control. Once the tests have been passed, the final evaluations are carried out to determine the final classification of the certificate.

Where the inspection and testing is satisfactory, the Certification Commission grants the corresponding certificate and authorization for the use of the A+ mark on certified products.

For the maintenance and/or renewal of the certification, annual follow-up inspections are carried out to ensure that the quality of the product continues to meet the necessary requirements .

What are you going to get?

Certified products shall have a certificate, indicating the characteristics of the product and its certified performance, together with the information concerning test reports and audits clear and transparent for users of such products, prescribers, insurers, public administrations, etc.

This certificate helps different users and prescribers of the product (architects, consultants, site managers, insurers, etc.) to understand the characteristics of the product and give a technical answer to legal requirements.

Along with the report, an A+ Fire Safety seal will be delivered and displayed on the certified product, with an identification number that will allow verification of its validity and authenticity by accessing the online database of Applus+ Laboratories certified products.

Market access brand

The A+ Fire Safety brand is a global market access brand. In particular, it allows access to Middle Eastern markets, as it is recognized by most Gulf Cooperation Council (UAE, Qatar, Oman and Kuwait) countries.

In the case of the European market, the A+ Fire Safety Brand is applicable to those fire protection products not regulated by CPR 305/2011 and serves as a certification scheme volunteer for these products. For products to which the CRP does apply, this certificate accompanies the Certificate of Constancy of Benefits (CE Marking).

In countries without a specific certificate of conformity for fire products, the A+ Fire Safety brand is an added value, providing regulators with a verifiable certificate that guarantees the quality of the product.
